

VantagePoint User Guide

VantagePoint is a remote-support desktop app. One person **hosts** their computer to make it reachable, and another person **joins**/connects to it to view or control it, chat with them, and (in Interview Mode) talk with them live. This guide walks through installing the app and using every screen.

1. Installing VantagePoint

VantagePoint ships as a standard Windows installer, `VantagePoint-Setup.exe`.

1. Download the installer: [VantagePoint-Setup.exe](#)
2. Run the downloaded file and follow the setup wizard — choose an install location, and optionally create a desktop shortcut.
3. When installation finishes, launch **VantagePoint** from the Start Menu or the desktop shortcut.

Everything the app needs is installed together in its own folder — there's nothing else to configure before signing in.

2. Creating an Account

The first time you use VantagePoint, create an organization account from the login screen by clicking **Create one**.

Create Account

Set up your organization's VantagePoint account

ORGANIZATION NAME

EMAIL

PHONE NUMBER

PASSWORD

CONFIRM PASSWORD

Every new account starts on a free Trial plan (10-minute sessions, 3 per day).
You can upgrade to Prepaid anytime from Billing inside the app.

Create Account

Already have an account? [Log in](#)

- **Organization Name** — the name of your team or company.
- **Email** and **Phone Number** — used for account contact and support.
- **Password / Confirm Password** — your organization admin login.

Every new account starts on a free **Trial plan** (10-minute sessions, 3 per day). You can upgrade to a paid Prepaid plan at any time from Billing inside the app — see [Section 8](#).

3. Logging In

VantagePoint has two kinds of logins:

Login type	Who uses it	Can it host or join devices?
Team Member	Support staff who actually host or join devices	Yes
Organization Admin	The account owner/manager	Never hosts or takes control itself — instead, it can watch any live session for oversight, and manage the account

Organization Admin login (switch tabs at the top, then sign in with your Organization ID instead of a username):

The image shows a login interface for VantagePoint. At the top, the VantagePoint logo is displayed in blue. Below the logo, the text "Sign in to manage and access your devices" is shown. A green dot next to the text "Server reachable" indicates a successful connection, with a "Retry" button to its right. Below this, there are two buttons: "Organization Admin" (highlighted in blue) and "Team Member" (light gray). Underneath, there are two input fields: "ORGANIZATION ID" and "PASSWORD". The "PASSWORD" field has a toggle icon to its right. At the bottom, there is a large blue "Log In" button. Below the button, the text "Don't have an account? Create one" is displayed, with "Create one" as a link.

The green **Server reachable** indicator confirms the app can reach VantagePoint's servers before you try to log in. If it turns red, click **Retry**.

4. The Dashboard

After logging in you land on the Dashboard, which is where every session starts.

Welcome, Acme Corp

Org ID: ACMECORP-4F2A1B

PREPAID PLAN — \$75.00 (15.00h) remaining.

Which one do you want? If someone else needs to see or control THIS computer, choose Host. If you need to see or control ANOTHER computer, choose Join.

Host This Computer

Pick this if YOU are the one being helped. This computer becomes visible and controllable by whoever you share the Device ID with.

Join a Device

Pick this if YOU need to see or control someone else's computer. Ask them to click "Host This Computer" on their end first — they'll get a Device ID to give you. Once they're hosting, their device also shows up below in Available Devices.

Or enter a Device ID directly:

AVAILABLE DEVICES

Every device you've hosted from, on this account -- showing whether it's reachable over your Internet connection and/or your local network right now, and whether it's set up for Interview sessions.

ACMECORP-CD34 · Internet: ONLINE

- **Host This Computer** — pick this if *you* are the one being helped. Your computer becomes visible and controllable by whoever you share the Device ID with.
- **Join a Device** — pick this if *you* need to see or control someone else's computer. Enter their Device ID directly, or pick it from **Available Devices** below once they're hosting.
- The orange banner at the top always shows your current plan and remaining balance/hours.

5 / 13

Organization Admin view

The screenshot shows the 'Welcome, Acme Corp' dashboard. At the top, there's a navigation bar with links for 'View Logs', 'Activity', 'Users', 'Billing', and 'Log Out'. Below this, an orange banner displays 'PREPAID PLAN — \$75.00 (15.00h) remaining.' with a 'View Billing →' button. A note explains the difference between 'Host' and 'Join' actions. The main section is titled 'Join a Device' and includes a detailed explanation of oversight access. It features a text input field for a device ID and a 'Connect' button. Below this is the 'AVAILABLE DEVICES' section, which lists a 'Reception PC' with its status (Internet: BUSY) and a 'Connect' button. A 'Refresh' button is also present in the top right of the available devices section.

Which one do you want? If someone else needs to see or control THIS computer, choose Host. If you need to see or control ANOTHER computer, choose Join.

Join a Device

ⓘ Oversight access — you can watch any device's screen, including one already in a live session, but never control it or send anything. Watching never disturbs the session actually running between the client and that host.

Pick this if YOU need to see or control someone else's computer. Ask them to click "Host This Computer" on their end first — they'll get a Device ID to give you. Once they're hosting, their device also shows up below in Available Devices.

Or enter a Device ID directly:

Reception PC	×	Connect
ACMECORP-AB12 • Internet: BUSY • Live since 09:14		

An admin login only ever sees **Join a Device**, and it's oversight-only: watching a device (even one already in a live session) never disturbs or takes over that session — you can look, but never control or send anything. Admins also get an extra navigation bar for:

- **View Logs / Activity** — see [Section 9](#)
- **Users** — see [Section 10](#)
- **Billing** — see [Section 8](#)
- **Log Out**

5. Hosting a Device

Click **Host This Computer** from the Dashboard to open the Host screen.

Host This Computer

Share this PC so you can access or support it remotely.

• **Not hosting**

DEVICE ID

—

Copy

SESSION TYPE

Normal

Interview

Interview Mode shares two-way voice and isn't limited by your plan/balance -- only whether this account is blocked. Whoever connects to this device gets the mode you pick here; they have no way to change it.

Connect over Local Network (WiFi) instead of the Internet

Only reachable by a viewer on the same WiFi/network. Faster and uses no internet bandwidth for the session itself -- your plan is still checked and updated online at the start and end of the session.

Start Hosting

Once a viewer connects, this window disappears completely -- no taskbar entry, no tray icon -- this computer's system audio (whatever is playing) becomes audible on the viewer's end, and the whole session is recorded. If they disconnect, this device stays online waiting for the next viewer, still hidden. Ending the session is up to whoever's connected from there on.

- **Device ID** — a unique ID for this computer, generated automatically. Share it (via **Copy**) with whoever needs to join.
- **Session Type:**
 - **Normal** — a standard support session, counted against your plan's time/balance.
 - **Interview Mode** — a two-way voice call that isn't limited by your plan or balance (only whether the account is blocked). Whoever connects gets whatever mode you picked here; they can't change it.
- **Connect over Local Network (Wi-Fi) instead of the Internet** — check this if the viewer is on the same network. It's faster and uses no internet bandwidth for the session itself (your plan is still checked online at the start and end of the session).
- Click **Start Hosting** to go live.

Once a viewer connects, this window disappears completely — no taskbar entry, no tray icon. This computer's **system audio** (whatever is playing — a video, music, a call) becomes audible on the viewer's end for the rest of the session, and the whole session is recorded. If the viewer disconnects, the device stays online (still hidden) waiting for the next one. Ending the session is up to whoever is connected from that point on.

Note: Only this computer's system audio is ever sent — your microphone is never captured or transmitted while hosting (except in Interview Mode, which is a deliberate two-way voice call both sides opt into).

6. Joining / Connecting to a Device

From the Dashboard's **Join a Device** panel:

- If the device is already listed under **Available Devices**, click its **Connect** button.
- Otherwise, type the Device ID directly into the **device-id** field and click **Connect**.

This opens the Viewer window for that device.

7. The Viewer Window

The Viewer window is where you actually watch or control a hosted device. Its control bar (top) includes:

-  **Mute** /  **Muted** — always available. In Normal sessions, mutes the system audio you're hearing from the host. In Interview Mode, also stops sending your own mic.
-  **Take Control** /  **Release Control** — by default you're in Pointer Mode: moving your mouse only drives a visible marker overlay on the host's screen, and clicks just flash a "click here" pulse — nothing you do actually reaches the host's computer. Take Control opts into actually driving the host's mouse and keyboard.
- **Toggle Overlay (On/Off)** — shows or hides the movable text overlay on the host's screen.
-  **Position Text** /  **Fix Position** — lets you drag the text overlay to where you want it on the host's screen, then lock it in place.
-  **Disconnect** — ends the session at any time.
- **Terminate Connection** — appears if the connection drops and is reconnecting; use it to give up and close the session instead of waiting.

Below the control bar (when you're not just observing) is the **text bar**, for sending messages that appear as an overlay on the host's screen:

- Type a message and it's sent as you type.
-  **Speak** — record a short voice note and have it transcribed to text automatically.
- **Clear** — clears the current overlay text.
-  **Style** — customize the overlay's text color/size/font, the pointer's color/size, and how many words per line spoken transcripts wrap to.

If you’re on a Trial plan, a dismissible banner across the top reminds you of your remaining session time.

8. Billing

Open **Billing** from the Dashboard (admin only) to see your plan, balance, usage, and payment history.

Buy Hours

Shows your current balance and hours remaining up top, total sessions/minutes used, and a **Buy Hours** button for topping up.

Clicking **Upgrade to Prepaid** / **Buy Hours** opens a page where you enter your email and submit a request — our team reaches out directly to get your account upgraded or topped up.

Use the **Refresh** button after completing a request to pull the latest balance.

9. Activity Logs

Available to Organization Admins only, via **View Logs** / **Activity** on the Dashboard.

[← Back to Dashboard](#)

Activity Logs

 Refresh

Every session any team member has run -- which device, when, for how long, and how it ended. Most recent first.

Team Member	Device	Started	Duration	Ended By
sara.support	ACMECORP-AB12	2026-09-17 09:14	22.5 min	Disconnected
ali.tech	ACMECORP-CD34	2026-09-16 16:40	8.0 min	Local session ended
sara.support	ACMECORP-EF56	2026-09-16 11:02	45.2 min	Disconnected

Every session any team member has run, most recent first — which team member, which device, when it started, how long it lasted, and how it ended (e.g. disconnected by the viewer, or the local session ending on the host's side).

10. Managing Team Members

Available to Organization Admins only, via **Users** on the Dashboard.

← Back to Dashboard

Team Members

Logins that can host and take full control -- separate from your own Organization ID login, which never hosts or takes control itself and isn't listed here. Your own login can watch any of these devices at any time, live sessions included, without disturbing them.

Add a Team Member

USERNAME

PASSWORD

Add Team Member

EXISTING TEAM MEMBERS

sara.support

Can host and take full control

Remove

ali.tech

Can host and take full control

Remove

- **Add a Team Member** — create a new login (username + password) that can host and take full control.
- **Existing Team Members** — see everyone with access, and **Remove** anyone who shouldn't have it anymore.

Your own Organization Admin login is intentionally separate from this list — it never hosts or takes control itself, but it can watch any of these team members' devices at any time, including live sessions, without disturbing them.

Troubleshooting

- **"Server reachable" shows red on login** — check your internet connection, then click **Retry**. VantagePoint needs to reach its servers to log in, even for Local Network sessions.
- **Trial session ends unexpectedly** — Trial sessions are capped at 10 minutes each and 3 per day; upgrade to Prepaid (see [Section 8](#)) to remove both limits.
- **No sound from the host** — confirm the host actually has audio playing (system audio, not their mic) and that the viewer hasn't muted the session.

- **Account blocked** — hosting and joining (including Interview Mode) are disabled until this is lifted; contact your account admin or support.
